Abstract of corresponding document: **US5487556**

An air bag module (10) includes a housing (12), an air bag (14), and an inflator (16). A pair of wave springs (20, 22) are mounted on opposite end walls (40, 42) of the housing (12). The springs (20, 22) engage opposite end portions (132, 134) of the inflator (16) to secure the inflator to the housing (12). The inflator (16) extends through a cardboard plenum tube (18) in the housing (12). The plenum tube (18) keeps open a passage in the air bag (14) for insertion of the inflator (16) during assembly of the module (10).
